Fun Facts

There are more than 30 known species of mice.

A mouse can slip through holes and gaps as small as 1/4 inch

Mice are nocturnal animals. They have poor eyesight but make up for this with their very good hearing and smell.

Flying squirrels usually glide between 20 and 30 feet.

Although they are known as "flying squirrels", they do not actually fly - they glide through the air.

SEASONAL FEATURED SERVICE

YOUR HOME HAS LOTS OF PLACES FOR ANIMALS & PESTS TO 'HUNKER DOWN' THIS WINTER...

Rats, Deer Mice, House Mice, Squirrels, Flying Squirrels, Raccoons, and Possums are all looking for a place to spend the winter season. They have all agreed your house looks warm and inviting. Unfortunately, none of these critters are willing to pay rent for that space in your attic, basement, or crawl space. Additionally, they may leave reminders of how nasty they are as tenants. Speaking of nasty, they will leave behind droppings and urine as an unwelcome housewarming gift! In addition, these ingrates may damage wires, ductwork, insulation, and vents during their stay. As if that was not enough, many of these critters have picked up hitchhikers such as fleas, ticks, mites, and parasitic worms. Yuck! Yuck! And double Yuck! It is time to evict these squatters and keep them from coming back with a No Vacancy sign protected by repairing and sealing any areas where they could possibly sneak inside.

Call McNeely Pest Control and we will inspect your attic, basement, or crawl space and decide how best to prevent and/or remove these interlopers, and keep them from returning for years to come. Our expert wildlife technicians have extensive knowledge of the biology and behavior of all these critters, and have a passion for protecting your property. There is nothing better than the training and experience that our professional staff has to be better prepared to resolve any critter issue that rears its ugly head. Sealing and repairing entry points is essential in permanently excluding these varmints.

"Just wanted to write a note to thank you guys for your good service. I often find myself getting frustrated with companies with poor customer service but Nathan has been nothing but professional and responsive from day one. It's nice to know it's one less thing to worry about the house since he is always on top of our schedule. Thanks again for the good work."

— MC, Greensboro

SPECIALTY SERVICE & OFFER

T.A.P. INSULATION IS AN ENERGY SAVER!

WELCOME WAYNE!

We would like to welcome and introduce Wayne Grush. Wayne joined McNeely Pest Control in October of this year as our new Technical Director/Manager. He is an LSU graduate with a degree in Biology/Physics and obtained his Masters in Entomology from the University of Florida. Previously a high school teacher Wayne transitioned to the pest control industry when he started his own company. He has held 20 certified applicator licenses in 5 states and started a pest control training company. Wayne has been active in local, state and national pest associations over the years. He has recently made the move to North Carolina to be near his grandchildren.

What a great idea! Insulation that provides Thermal benefits by helping to keep your home warmer in the winter and cooler in the summer. Insulation that uses Acoustic properties to reduce noises such as traffic, lawn mowers, airplanes and barking dogs. Insulation that provides a Pest Control benefit using an EPA approved product infused into the material. T.A.P. insulation can be installed in areas where rolled insulation may be harder to install. T.A.P. insulation is made of recycled paper and infused with boric acid. T.A.P. insulation contains a fire retardant that prevents the product from burning. T.A.P. can improve your indoor air quality, give you energy savings in both the winter and summer, and reduce conditions that attract pests. T.A.P. insulation has an Energy Star label. In addition, we can condition your crawl space to reduce moisture and mold and mildew. Insulation contaminated by critters can cause health issues that can be remedied by removing the old insulation and replacing it with new clean T.A.P. insulation. Protect and improve your property by installing fresh new T.A.P. insulation now. Call now for a free inspection of your home and crawl space.
